

Product Edit Flow - Documentation

Overview

For this task, I implemented a Product Edit Flow page inside a Shopify embedded application.

The page contains two tabs:

- Media
- SEO

A common Save and Discard section is available at the top and works for both tabs.

The SEO data is loaded only when the SEO tab is opened.

Features Implemented

Media Tab

- View product images
- Add image using URL
- Remove image
- Edit image alt text
- Reorder images using Up and Down buttons
- Select featured image

SEO Tab

- Edit SEO title
 - Edit SEO description
 - Edit URL handle
 - Display canonical URL
-

Validations Implemented

Media

- Empty image URL is not allowed
- Invalid URL is not allowed
- Maximum image limit is 250
- Last remaining image cannot be removed

SEO

- Handle cannot be empty
- Handle must contain only lowercase letters, numbers and hyphens
- Duplicate handles are not allowed
- SEO title maximum length is 70 characters
- SEO description maximum length is 320 characters

Manual Testing Report

Test Case	Expected Result	Status
Open product edit page	Product details are loaded	Pass
Add valid image URL	New image card appears in UI	Pass
Add invalid image URL	Validation alert is shown	Pass
Remove image	Image is removed from UI	Pass
Remove last image	Removal is blocked	Pass
Edit alt text	Updated value appears in input field	Pass
Move image up	Image position changes	Pass
Move image down	Image position changes	Pass
Select featured image	Image moves to first position	Pass
Open SEO tab	SEO data loads successfully	Pass
Edit SEO title	Value updates in UI	Pass
Edit SEO description	Value updates in UI	Pass
Edit handle	Canonical URL updates	Pass
Enter duplicate handle	Error message displayed	Pass
Enter invalid handle	Validation error displayed	Pass
Save changes	Changes saved successfully message displayed	Pass
Click Discard	Changes revert to original values	Pass
Switch tabs without saving	Unsaved changes are preserved	Pass
No changes made	Save button remains disabled	Pass

Conclusion

The Product Edit Flow was implemented successfully with Media and SEO management features. Validation checks, lazy loading, save/discard functionality, and cross-tab persistence were tested manually and worked as expected.
